

INTUITIVE provides the following Complex Electronics/FPGA Services:

When you face a design challenge, or when you want to ensure you have access to superior professional expertise throughout a project, our dedicated engineering consulting services can offer just the level of support you need. We have an array of talent, all in one place, to offer you speed, proficiency, and professionalism. By bringing in experts, just when you need them, you can optimize your budget, schedule, and performance requirements for your project.

We can assist you on a one-time basis, in the initial stages of a project, when a crisis is brewing mid-project, or in the home stretch when things just won't come together. This "on call" dedicated engineering is the height of efficiency in boosting your design productivity. Our engineers respond quickly, either at your site or at a remote location, with hands-on service that pinpoints the problem and has you moving ahead again in minimal time. You save time, money, and frustration.

Capabilities:

- Full turn-key design
- Signal processing module design and development
- Integration support
- Design implementation
- Design tradeoff / Feasibility analysis
- Intellectual property (IP) development, acquisition and integration
- Physical design
- System on a chip (SOC) designs
- Technology consulting
- Technology migration
- Test services
- Verification / Test bench development
- VHDL / Verilog

CORE COMPETENCIES

- *Systems Analysis and Integration*
- *Project and Technical Management*
- *Development and Rapid Prototyping*
- *Production Systems Support*
- *Quality and Reliability Support*
- *Simulation Analysis and Modeling*
- *Test Analysis and Support*
- *Technical Support*
